代谢组：链接分子表型与人体健康的分子层 Linking molecular phenotype with health status

SYSTEMS BIOLOGY
Metabonomics
 Jeremy K. Nicholson and John C. Lindon

Organisms often respond in complex and unpredictable ways to stimuli that cause disease or injury. By measuring and mathematically modeling changes in the levels of products of metabolism found in biological fluids and tissues, metabonomics offers fresh insight into the effects of diet, drugs and disease.

What are the origins of the field?
 The idea that changes in tissue and biological fluids are indicators of disease goes back as far as ancient Greece. Diagnostic urine charts were widely used from the Middle Ages onwards (Fig. 1). These charts linked the colors, smells and tastes of urine to various medical conditions. Such features are, of course, metabolic in origin. Metabonomics, and the related field of metabolomics, uses modern techniques to analyse samples, but the basic principle of relating chemical patterns to biology is the same.

How does this approach fit in with systems biology?
 Metabonomics dovetails beautifully with the philosophy of systems biology, because it provides a top-down, integrated view of biochemistry in complex organisms, as opposed to the traditional 'bottom-up' approach that investigates the network of interactions between genes, proteins and metabolites in individual cell types. It provides with systems biology in that each level of biological organization and control — genetics, gene expression, protein expression and metabolism — operates on a markedly different timescale from the others, making it difficult to find causal linkages. Moreover, environmental and lifestyle factors greatly influence metabolism, making it difficult to discern their effects from gene-related outcomes. Environmental influences on gene expression also make it hard to interpret genomic data, for example to predict an individual's susceptibility to disease. Metabonomics cuts through these problems by monitoring the global outcome of all the following factors, without making assumptions about the effect of any single contributor to that outcome. To us, it is linking the individual contributions to be treated out.

Figure 1 Metabonomics of urine. This urine chart was published in 1706 by Charles Boissier in his book *Apoplexus Medorum*. It describes the possible colors, smells and taste of urine, and uses them to diagnose disease.

SPECIAL SECTION
Metabolism Is Not Boring

INTRODUCTION
 DO INVESTIGATORS EVEN MENTION METABOLISM? HAS ANYBODY LEFT ASKING after a presentation at a conference (on metabolism and cancer, no less). It may have been "boring" to them" in this case, but what had been in your mind a "boring" topic? It seems that for a generation of biological scientists, metabolism was an area of background to be mentioned and then put aside. Metabolism was always there in the background, providing the cell with the energy and resources to do what was required, but rarely recognized for its biological influence, and the influence by the physiological state of the cell.

The special issue of Science celebrates a resurgence of interest in metabolism and an appreciation of its central role in disparate areas of cell biology, physiology, medicine, and synthetic biology. It was a resurgence of interest that was encouraged by the interdisciplinary McKnight Perspectives (p. 1335) that took a broad look at the field and justified its excitement that recognizing the reciprocal regulation of metabolism and other cellular processes promises to advance our understanding of complex physiology.

There is renewed interest in the mechanism of cancer cells and its potential as a therapeutic target. Levine and Patten-Kolar (p. 1340) review metabolic changes in cancer cells, as well as the recent suggestion that alterations in a metabolic enzyme can lead to the production of an "oncometabolite" that supports cancer cell growth. When energy reserves are limited, cells use a glyoxylate shunt as a pathway for breaking down cellular components to provide substrates for metabolism. Falmagne and White (p. 1342) discuss roles of shunting in metabolism, its regulation, and its implications for cancer and degenerative diseases.

Of course, not all fields have neglected metabolism over the years, and an extensive literature describes the role of waste and related biomass in controlling cellular metabolism. In a focus issue of Science Signaling, a Research Article and Perspectives describe an unexpected signal from the insulin receptor that confers sensitivity to cell death when insulin is not present. Also highlighted was a role for lipids as cellular sensors of glucose metabolism and a mechanism by which cells can sense oxidative stress by altering the activity of their protein degradation complex, the proteasome.

In Science Translational Medicine, Valentin and Hatanoglou review how a strategy to control obesity and insulin resistance, a therapeutic inhibitor of cell signaling pathways, may have unintended actions in multiple cell types. Back in Science, Hsu and Tallant (p. 1349) review new insights into the variation of metabolic flux in insulin-dependent diabetes. Dependence of output and growth of activity away from the normal light-dark cycle, as experienced in jet lag or shift work, have implications on metabolic disease. Dependence of output and growth of activity away from the normal light-dark cycle, as experienced in jet lag or shift work, have implications on metabolic disease. Dependence of output and growth of activity away from the normal light-dark cycle, as experienced in jet lag or shift work, have implications on metabolic disease.

Cellular metabolic pathways, particularly in yeast or bacteria, can be exploited to synthesize compounds that are difficult or expensive to produce by other means. Kauring (p. 1351) reviews advances in metabolic engineering and their future. It is a future in which customized microbes made by computer-aided design can efficiently produce desired chemicals, ranging from fuels to pharmaceuticals.

质谱技术：具有广泛普适性的分析工具

• 质谱是什么？

- “特殊的天平”，电场或磁场下称量气相离子的质量（质荷比 m/z ）

• 质谱的原理

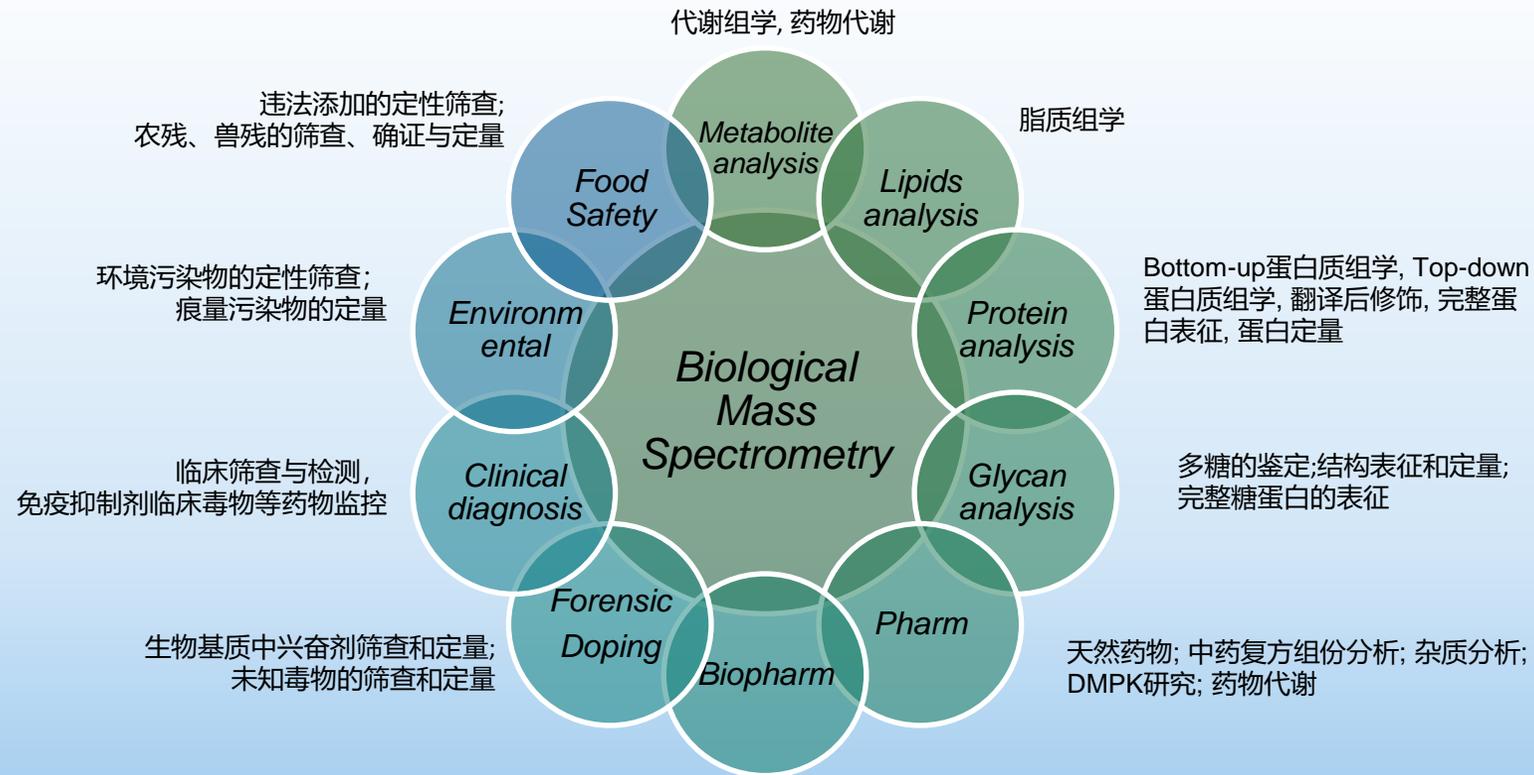

- 使化合物形成离子，在质量分析器中按其 m/z 进行分离和检测

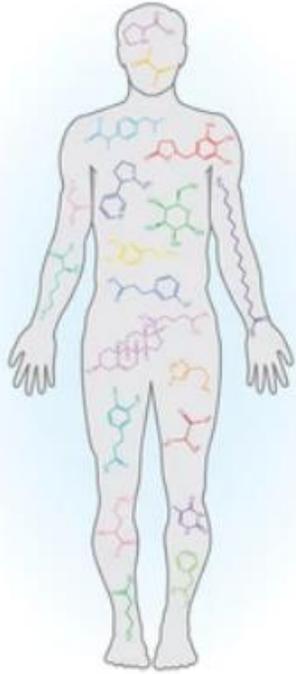

• 质谱能干什么？

- 核心：①定性—结构推测与发现；②定量—含量测定；③成像

• 行业评述

- 区别于测序市场，质谱作为一种通用型的检测技术，行业中最上游的6家进口设备厂商并不提供拿来即用的解决方案。
- 中下游的代谢组学技术服务商需要**专业团队、持续投入、专门开发**自己的代谢组学测量技术平台=Core facility。
- 特点：行业入门的门槛低，做好的门槛很高。

Metabolites play crucial biological roles; methods are needed for their study.

External users can access EMBL experimental services in the fields of structural biology, imaging, genomics, proteomics, metabolomics, in vivo gene editing, and chemical biology.

Proteomics and metabolomics may lag behind genomics.

— *Director of The European Molecular Biology Laboratory, EMBL*

The ability to measure the metabolome on a global scale lags behind other omics techniques. Given the diverse chemistries of metabolites, **no single analysis method offers a 'one-size-fits-all' solution.**

— *Nature Methods* **14**, 32 (2017)

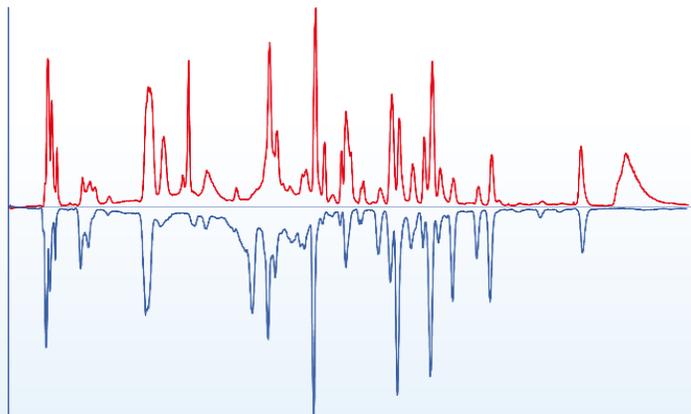

Metabolome代谢组所固有的化学结构高度多样性、理化性质极端异质性、浓度分布差异悬殊等等天然属性，决定了代谢组学的测量策略和技术路线

质谱代谢组学研究的两种策略：非靶向代谢组学、靶向代谢组学

- **Untargeted Metabolomics 非靶向策略: Global Profiling Survey**

WITHOUT a predefined compound detection list, **Semi-quantitative** Omics-level data

- 实现形式: UPLC-HRMS 超高效液相色谱-高分辨质谱

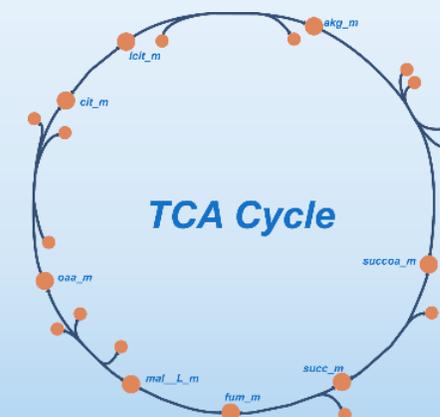

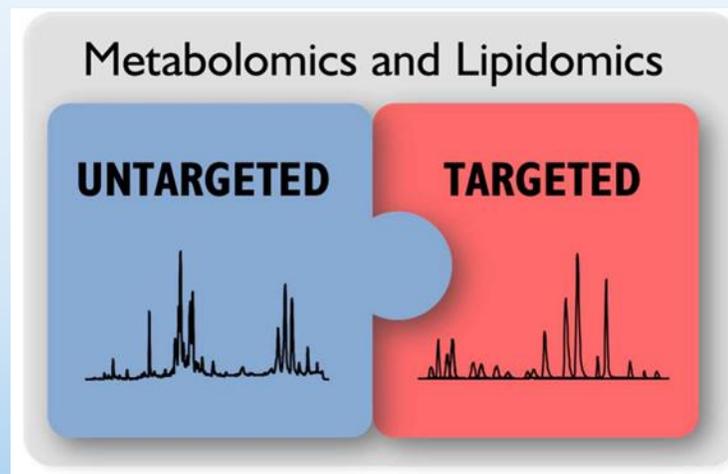

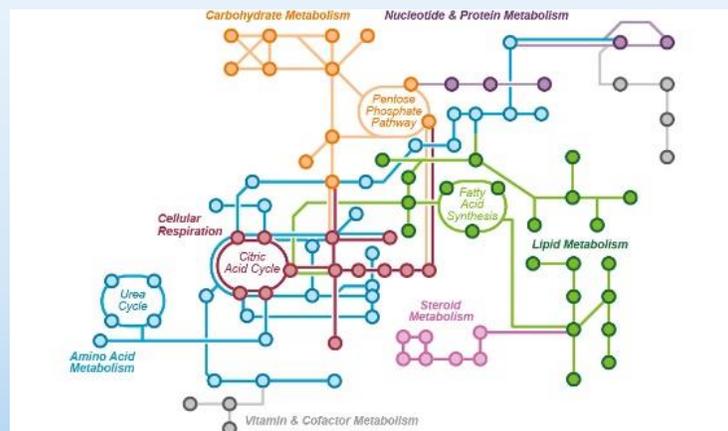

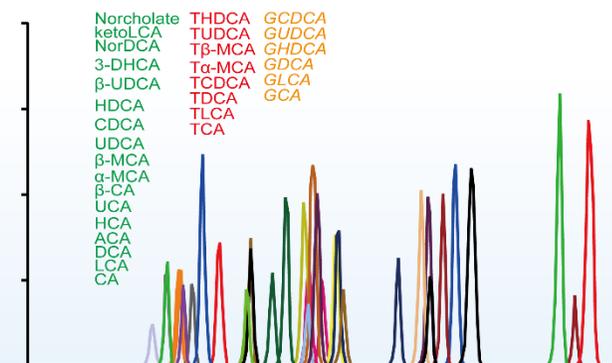

非靶向与靶向是代谢组学研究的两种策略，两者都能提供生物样本代谢组测量的定性与定量信息，两者间不存在非此即彼、“彼可取而代之”、孰优孰劣的竞争性关系。两者是互补的，技术的选择与课题目标以及研究者偏好、预算、技术可及性等因素有关。

- **Targeted Metabolomics 靶向策略: Targeted Survey**

WITH a predefined compound detection list, **Quantitative** data

- 实现形式: UPLC-MS/MS 超高效液相色谱-串联三重四极杆质谱

质谱代谢组学研究的两种策略：与OpenAI ChatGPT的对话

ZE

Hi ChatGPT, What is untargeted metabolomics?

Untargeted metabolomics is a comprehensive approach to the study of metabolites in biological systems, where all metabolites in a sample are detected and identified without prior knowledge or targeting of specific metabolites. This method allows for the unbiased discovery of metabolites and metabolic pathways, providing a broad view of the metabolic state of a system.

ZE

So, what's targeted metabolomics?

Targeted metabolomics is a quantitative and selective approach to the study of metabolites in biological systems, where specific metabolites or a predefined set of metabolites are measured and analyzed. This method is used when the researcher is interested in quantifying and characterizing known metabolites or metabolic pathways. Targeted metabolomics allows for higher sensitivity and specificity compared to untargeted metabolomics, as it focuses on a specific subset of metabolites.

ZE

Well, will targeted metabolomics replace untargeted metabolomics, or vice versa?

Neither targeted nor untargeted metabolomics can replace the other, as they both have unique strengths and limitations. Targeted metabolomics is ideal when the researcher is interested in a specific set of metabolites or metabolic pathways and requires high sensitivity and specificity. On the other hand, untargeted metabolomics is suitable for identifying unknown metabolites and global metabolic profiling, providing a broad view of the metabolic state of a system. Therefore, the choice of which method to use depends on the research question, the available resources, and the analytical goals. In some cases, both targeted and untargeted metabolomics can be used in combination to obtain a comprehensive understanding of the metabolic system under investigation.

ZE

I am shocked for your such professional comment! Is this your personal thinking, where do you get such comment?

As an AI language model, I don't have personal opinions or beliefs. The answer I provided is based on the current scientific consensus in the field of metabolomics, as well as the definitions and applications of targeted and untargeted metabolomics as described in peer-reviewed literature. My training data consists of a large corpus of text, including scientific papers, books, and articles, which allows me to provide accurate and informative responses to a wide range of questions.

质谱代谢组学技术体系：非靶向与靶向，坚定地两手抓！

- *Untargeted Global Profiling*非靶向策略：Omics-level数据，高覆盖（测得到）与高解析（定性出），最大化发挥高分辨质谱提供的卓越定性/定量效能
- 解决方案：领先的非靶向代谢组学技术平台 **Meta-Phenotyper™** 高解析代谢全谱技术

非靶向代谢组学的研究目标：

1. 刻画代谢表型全貌：获悉生物洞见 From biochemical landscape to biological insights
2. 筛查与发现：驱动科学假设 Trough screening to drive hypothesis

- *Targeted quantitative*靶向策略：因物制宜，分门别类，追求极致，充分验证，最大化发挥串接质谱具备的定量效能
- 解决方案：靶向代谢分析技术平台 **AccuQuanter™** 代谢物定量方法集群与试剂盒；**AQ1800**：1800种人体内源性代谢物与脂质的绝对定量

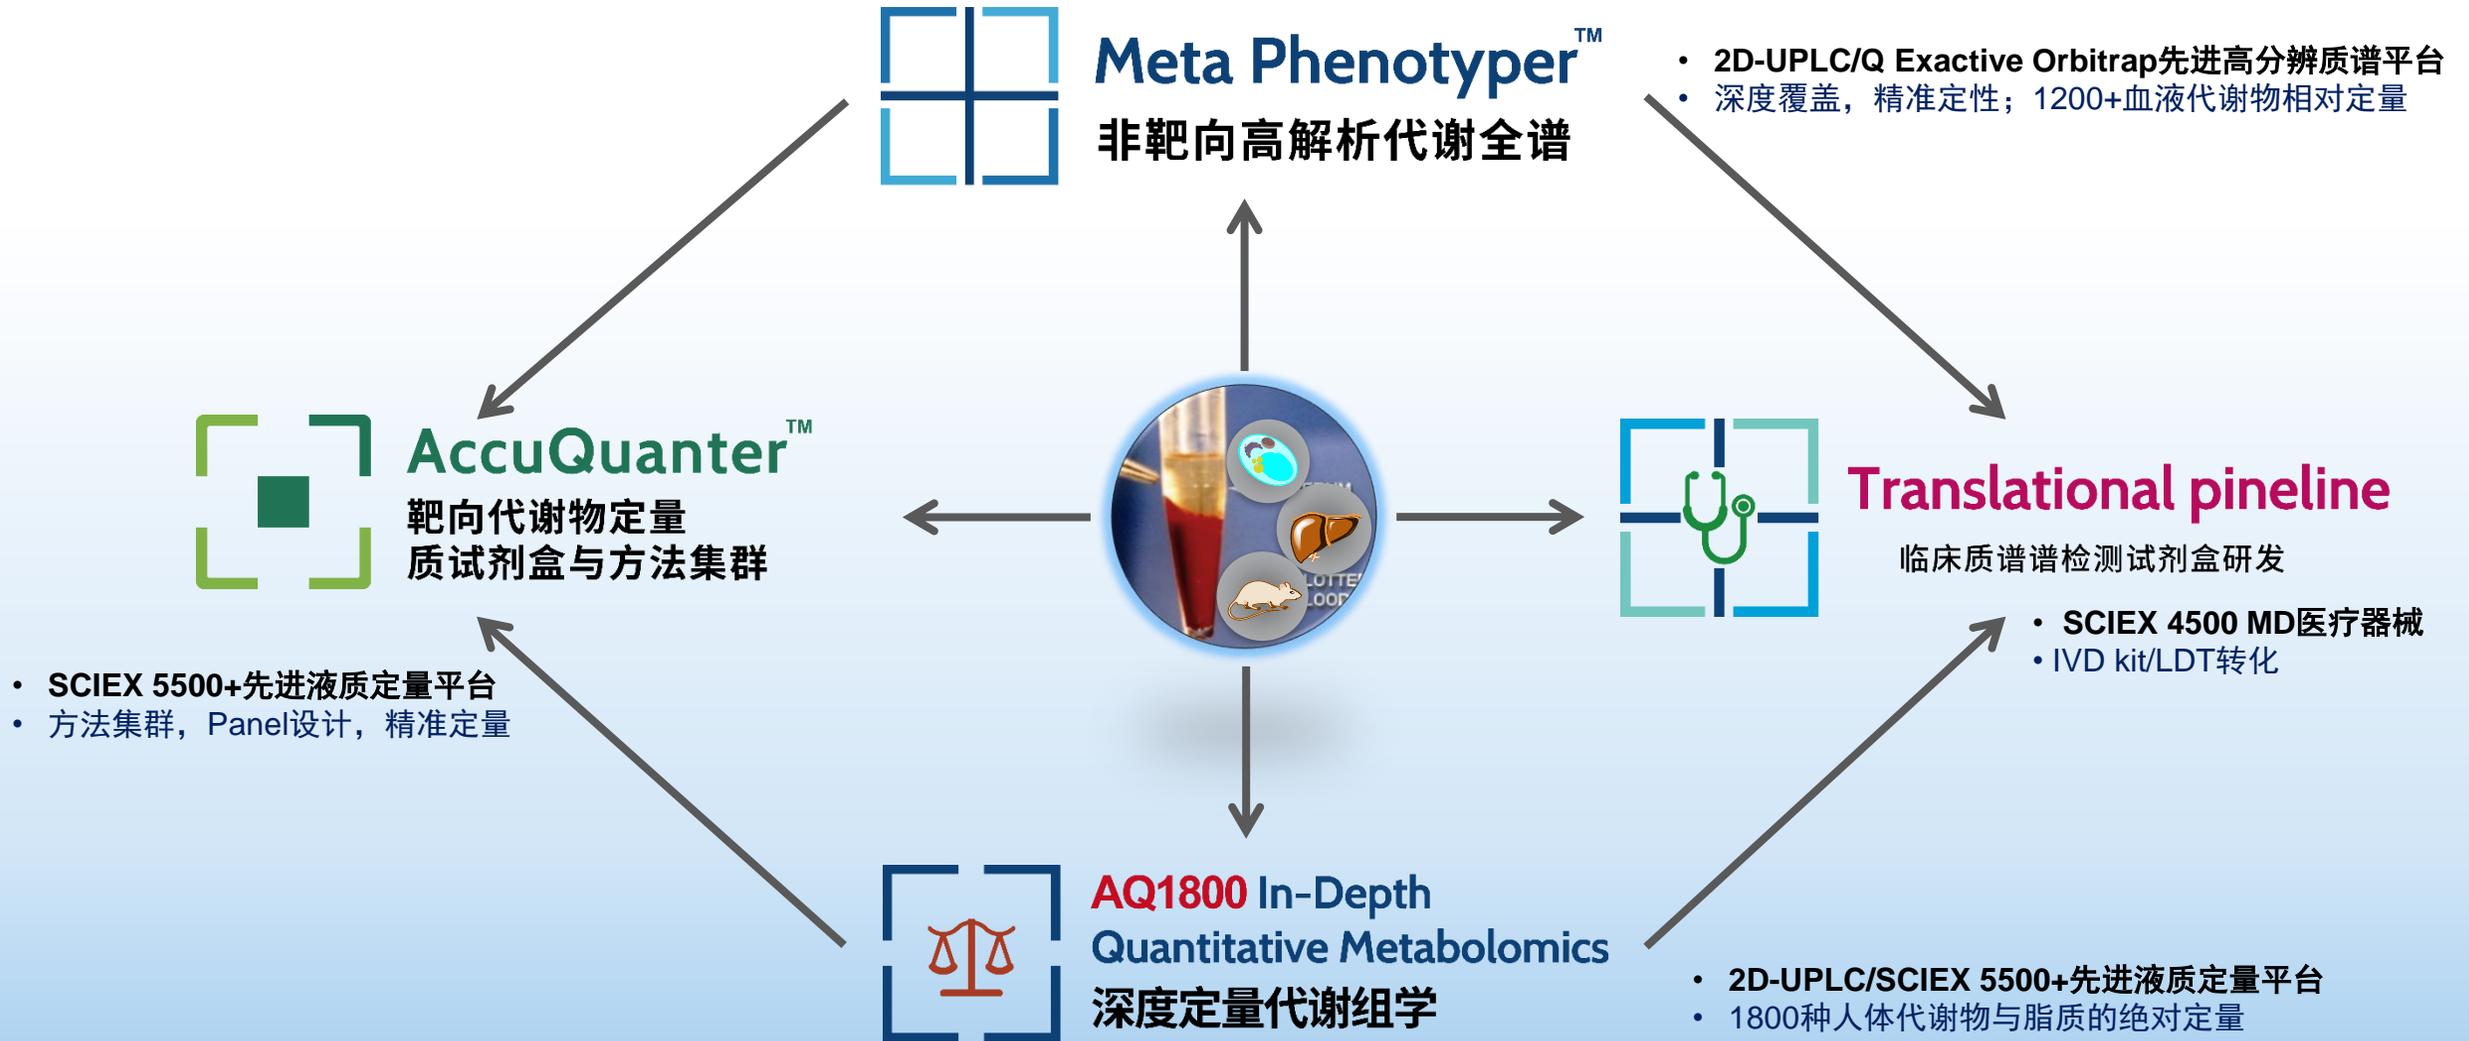

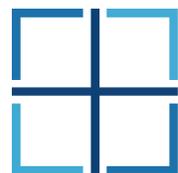

靶向代谢组学的研究目标：

1. 生物功能导向：Metabolites panel of biological relevance
2. 痕量检测：Trace level metabolites can not be covered with Untargeted profiling

- 质控体系: 秉承“好的质量是生产出来的”的数据质量观, 关口前移, 测试全流程质控
- 模块化: 五种标准化方法, 按需组合 (预算、测试深度需求), 推荐三种最常见检测套餐

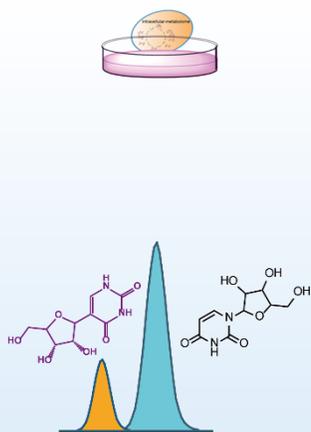

提示: 代谢物的最终鉴定数目与样本类型、质量有关。

基础知识：质谱是如何定量？

1. 非靶向-相对定量

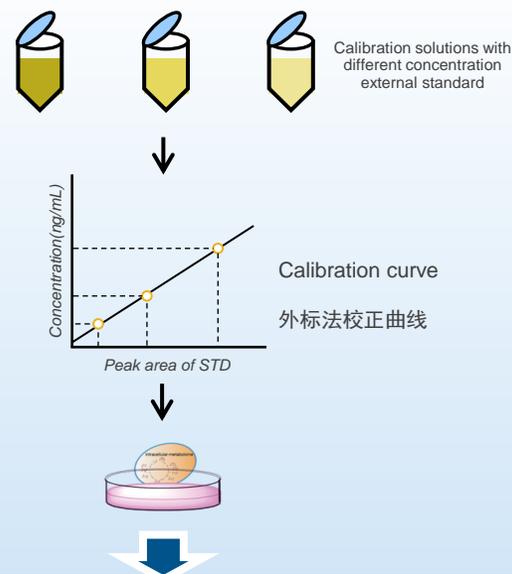

- 峰面积Peak area(无量纲)
- No Calibration curve

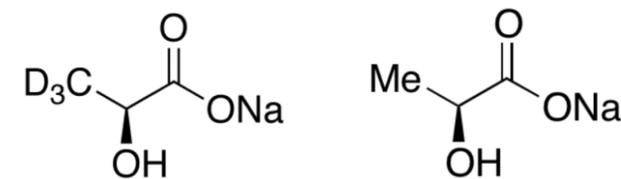

1. 操作简便
2. 与非靶向代谢组学分析无缝衔接
3. 相对定量结果（峰面积值）
4. 适于面积归一化法等其他定量计算

2. 外标法绝对定量

- 未经同位素标记的外标物

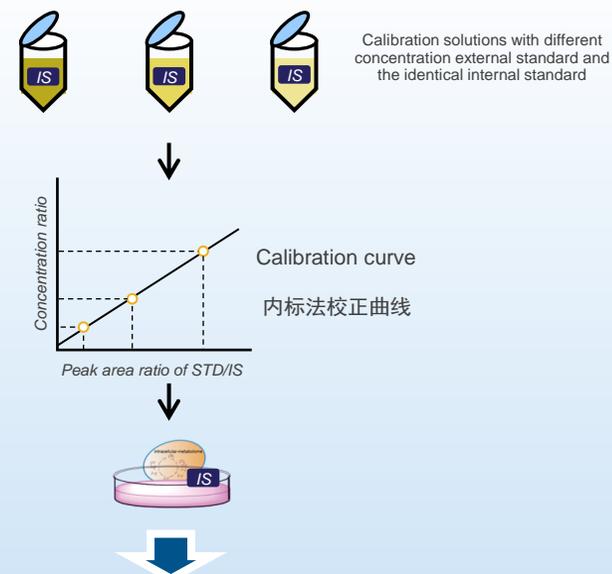

1. 最常用定量方法，结果较为准确
2. 进样量必须准确
3. 仪器稳定性要求高
4. 对样品前处理过程中被测组分的变化无法进行补偿

3. 内标法绝对定量

- 未标记的外标物 & 同位素标记的内标物 & 基质匹配空白样

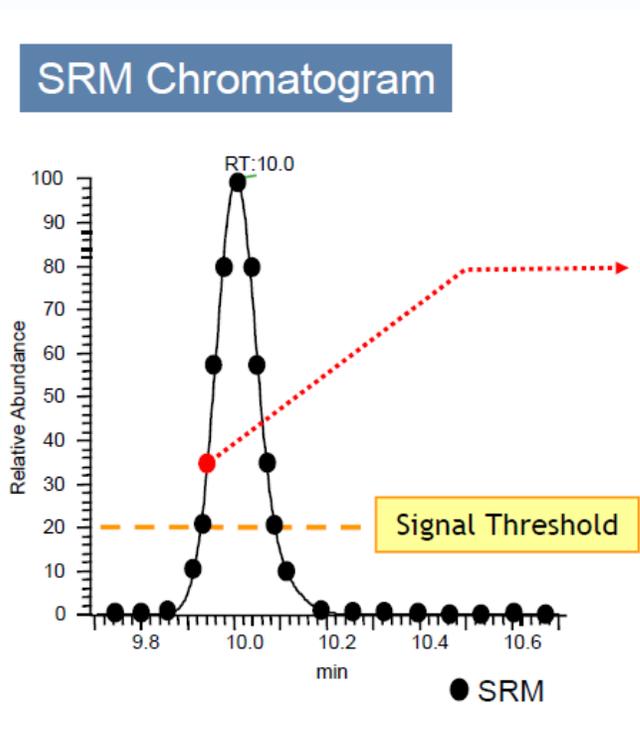

1. 检测内源性化合物金标准
2. 对分析方法细微变化较耐受
3. 可部分补偿被测组分样品前处理过程的损失
4. 操作相对繁琐，成本高
5. 受限于同位素标记标准品

靶向代谢组学数据采集：色谱保留时间，SRM离子对

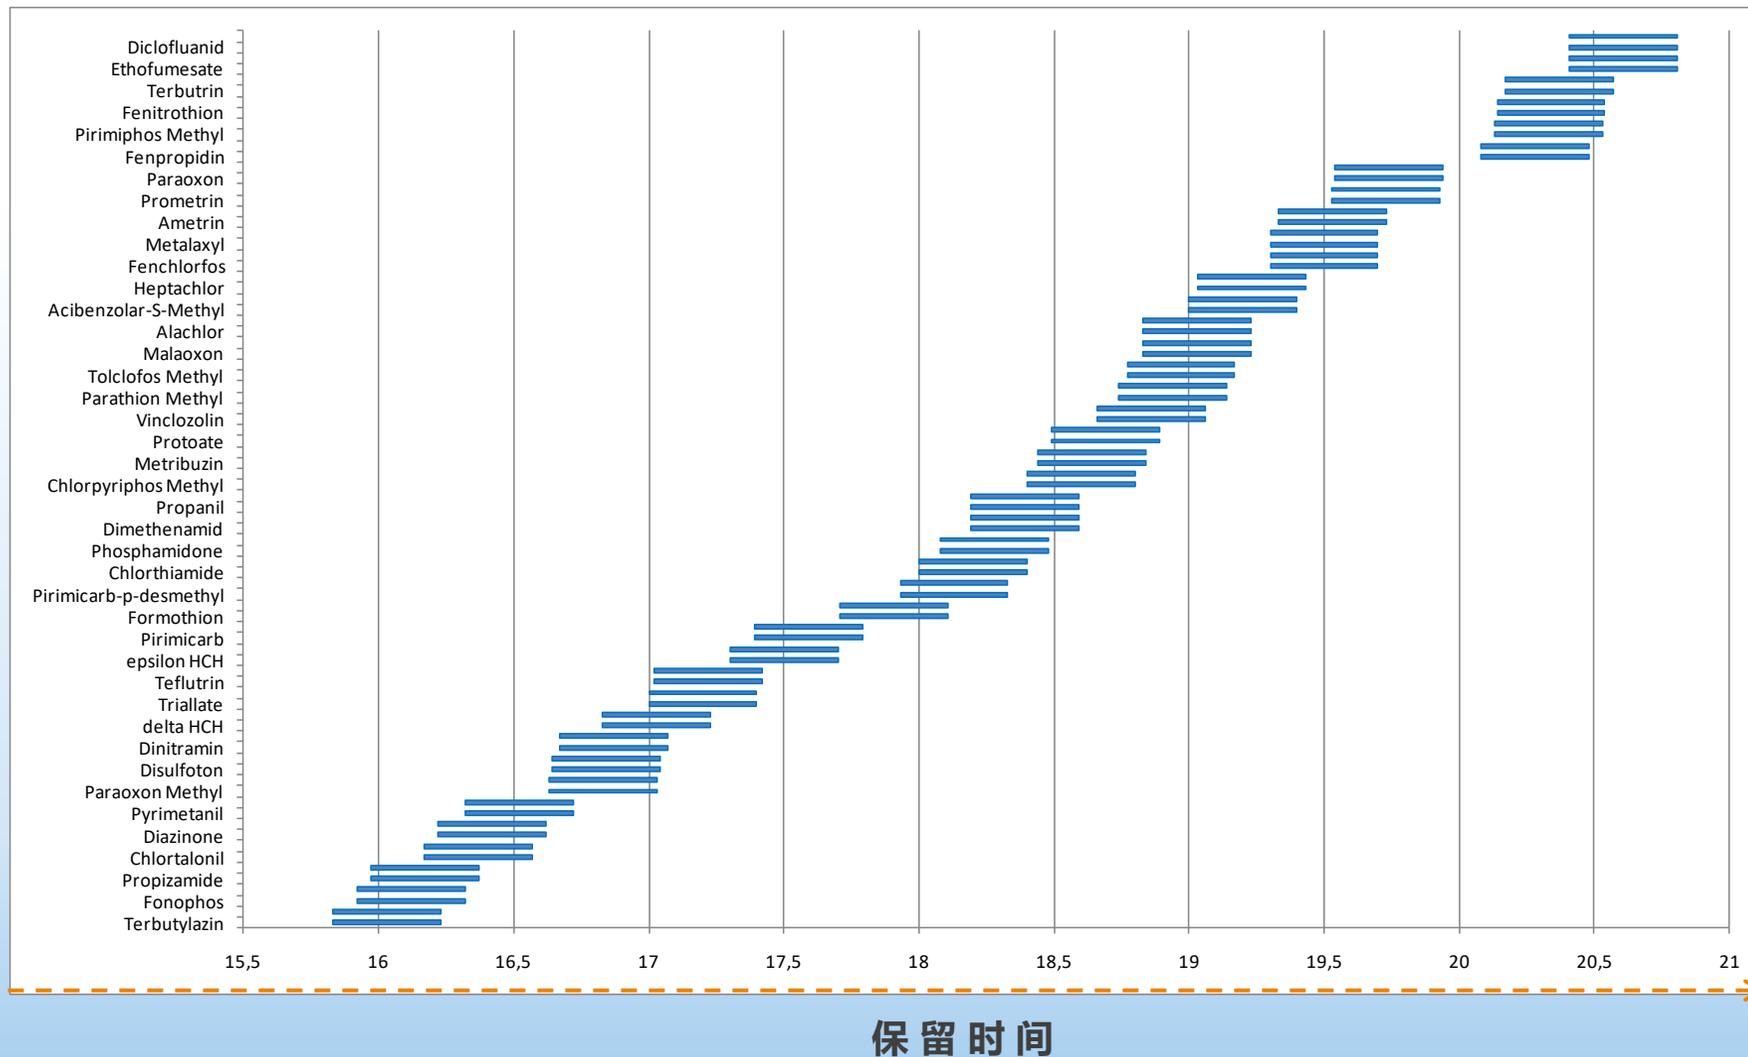

SRM选择反应监测模式 Selected Reaction Monitoring

SRM离子对 Transition:

母离子88.1 $\xrightarrow{\text{CID 碎裂}}$ 子离子66.1

- 动态SRM扫描色谱保留时间信息，自动分配、合理安排每个SRM离子对的扫描时间，完成数据采集
- 但精确地描绘一个色谱峰，至少需要10~15个质谱扫描点以确保定量效果。因此，SRM扫描离子对是有规模上限的。

• 先进的质谱测试平台

- 个性化定量Panel设计与实施

Metabolomics and Lipidomics

瞄准临床检验与诊断应用的技术转化来布局代谢物靶向定量方法开发和技术迭代

“乐高式” 组合=大规模靶向定量

靶向代谢物定量AccuQuanter™测试方法集群：聚是一团火，散是满天星

- 测试平台：行业领先的 SCIEX QTRAP 5500+ 二维超高效液相色谱-串联三重四极杆质谱；SCIEX QTRAP 4500 MD医疗诊断设备
- 标样库：常备300+种同位素标记内标，~1500种非标记外标标准品
- 开发原则：**因物制宜，分门别类，追求极致，充分验证***

- ◆ AccuQuanter™-Bile acids **胆汁酸**
 - ◆ **70种**胆汁酸
 - ◆ 同位素内标法定量
- ◆ AccuQuanter™-SMCFAs **短中链脂肪酸**
 - ◆ **15种**短链+中链脂肪酸
 - ◆ 同位素内标法定量
- ◆ AccuQuanter™-Carnitines **酰基肉碱**
 - ◆ **63种**中长链脂肪酸
 - ◆ 同位素内标法定量
- ◆ AccuQuanter™-Steroid hormones **甾体激素**
 - ◆ **32种**甾体激素
 - ◆ 同位素内标法定量

- ◆ AccuQuanter™-**有机酸与糖类**
- ◆ **86种**能量代谢、有机酸类代谢物
- ◆ 同位素内标法定量
- ◆ AccuQuanter™-**氨基酸核苷酸**
- ◆ **132种**氨基酸、核苷酸及其主要降解代谢物
- ◆ 同位素内标法定量
- ◆ AccuQuanter™-**肠道菌群特异性代谢物**
- ◆ **82种**肠道菌群特异性代谢物，文献荟萃验证
- ◆ 同位素内标法定量
- ◆ AccuQuanter™-**溶血型磷脂**
- ◆ **105种**LysoPC, LysoPI, LysoPE等
- ◆ 同位素内标单点法定量
- ◆ Lipid-Quan**定量脂质组学**
- ◆ **1200种**脂质
- ◆ 同位素内标单点法定量

 **AccuQuanter™**
靶向代谢物定量
质试剂盒与方法集群

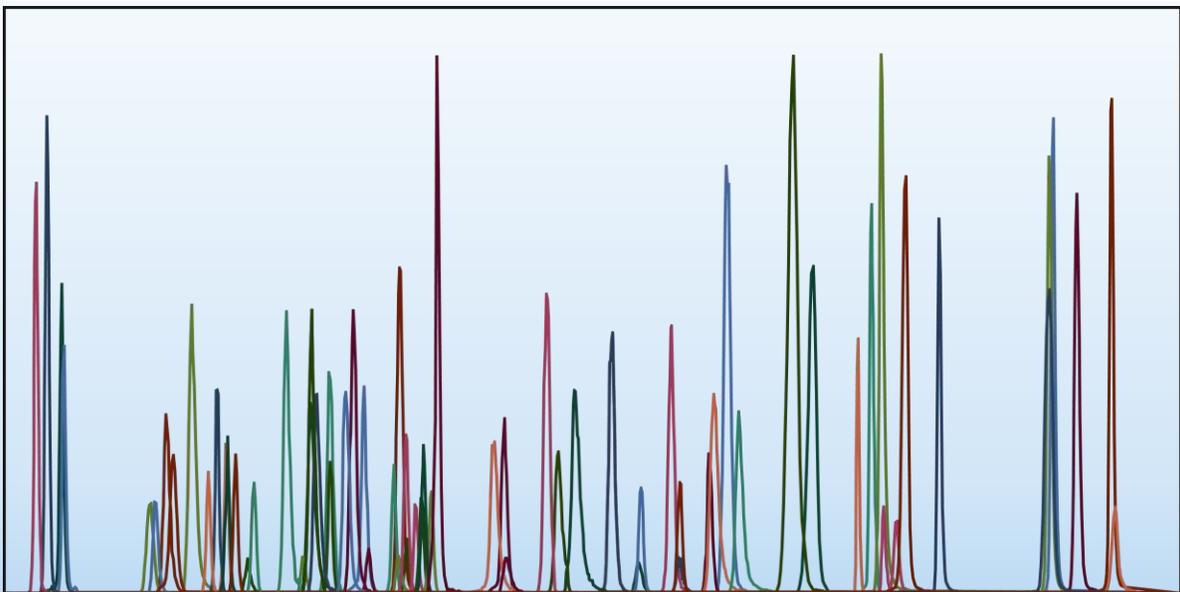

*: 参考美国FDA，欧盟EMA以及中国药典对生物样品分析方法验证的指导原则

靶向代谢物定量AccuQuanter™测试方法集群： 举例

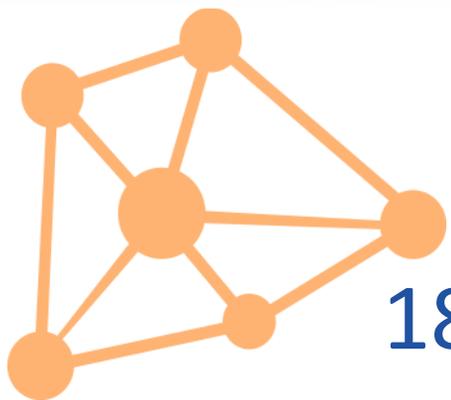

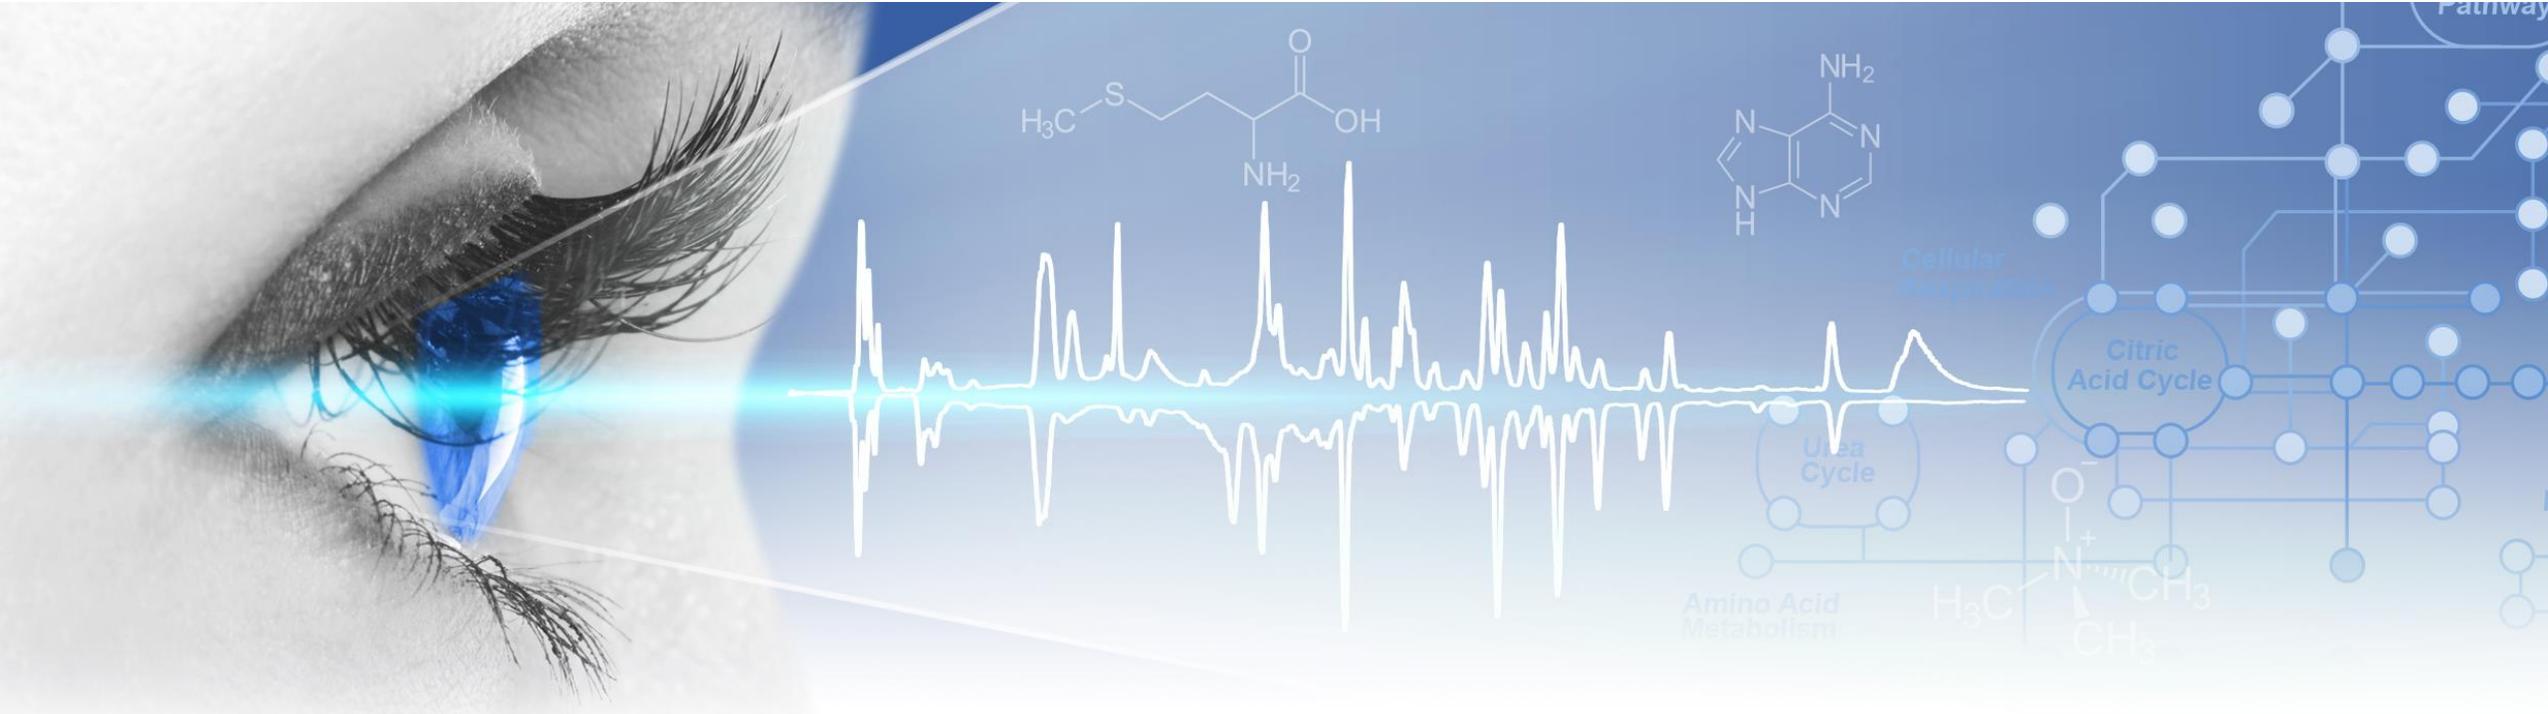

- 测试平台：行业领先的 SCIEX QTRAP 5500+ 二维超高效液相色谱-串联三重四极杆质谱；SCIEX QTRAP 4500 MD医疗诊断设备
- 标样库：常备300+种同位素标记内标，~1500种非标记外标标准品
- 开发原则：**因物制宜，分门别类，追求极致，充分验证***

AccuQuanter-Bile Acids 70种胆汁酸定量套餐

方法学参数	范围
精密度	0.29%~12.89%
回收率	83.23%~122.73%
准确度	81.17%~127.98%
残留率	0~18.30%
检测限	0.227 ng/mL~0.908 ng/mL
定量限	0.227 ng/mL~3.633 ng/mL

In-Depth Quantitative Metabolomics 深度定量
AccuQuanter-1800 (AQ1800)
1800种人类内源性代谢物与脂质的绝对定量服务

深度定量代谢组学：AQ1800—从非靶向出发，定量广泛地真实存在于人体内的内源性代谢物

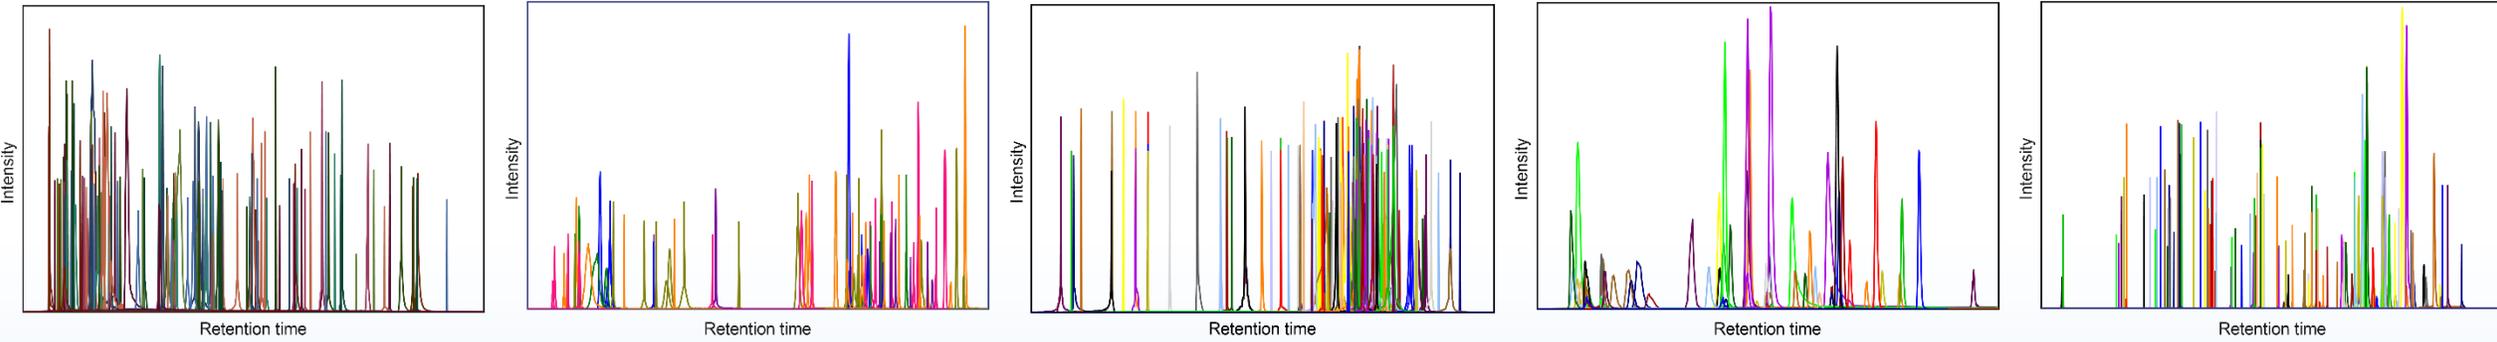

AQ1800：600多种极性代谢物+1200多种脂质；行业内覆盖最广的人体代谢组定量化测量

极性代谢物种类	检测数目	举例（3个）
氨基酸及其衍生物 二肽 短肽	94	甲状腺素 眼酸 麦角硫因
核苷酸代谢 B族维生素 胆碱类	38	5'-甲硫基腺苷 1-甲基-6-氧代吡啶-3-甲酰胺 假尿苷
中长链脂肪酸 脂肪酸类衍生物	63	二十碳五烯酸 3-羟基癸酸 12-HETE
胆汁酸	57	甘氨酸猪胆酸 3-硫酸石胆酸 7-酮石胆酸
碳水化合物 氨基酸与能量代谢下游的有机酸 短链脂肪酸	83	异丁酸 3-羟基戊二酸 果糖
特异性肠道菌群代谢物 其他类	105	吲哚-3-丙酸 4-硫酸雌马酚 肠内酯
溶血型磷脂	105	LysoPC(16:0e/0:0) LysoPE(16:0p/0:0) LysoPI(0:0/20:4)
酰基肉碱	66	异戊酰肉碱 十四二烯酰肉碱 二十烯酰肉碱

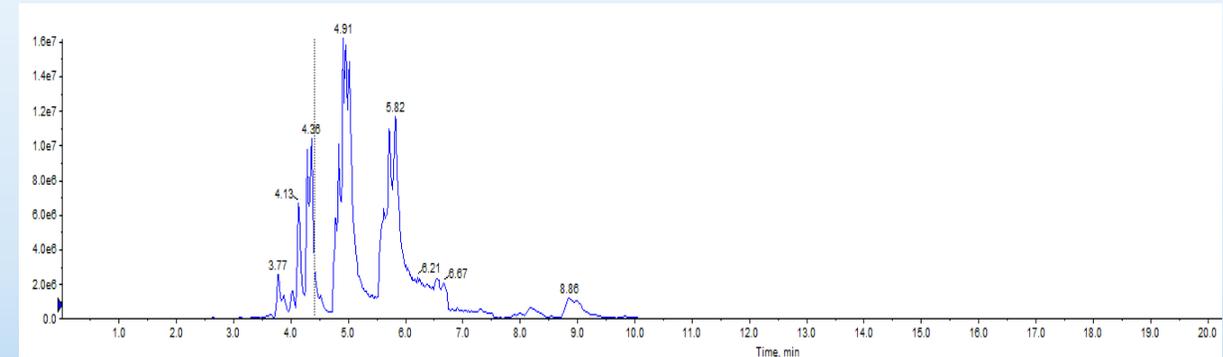

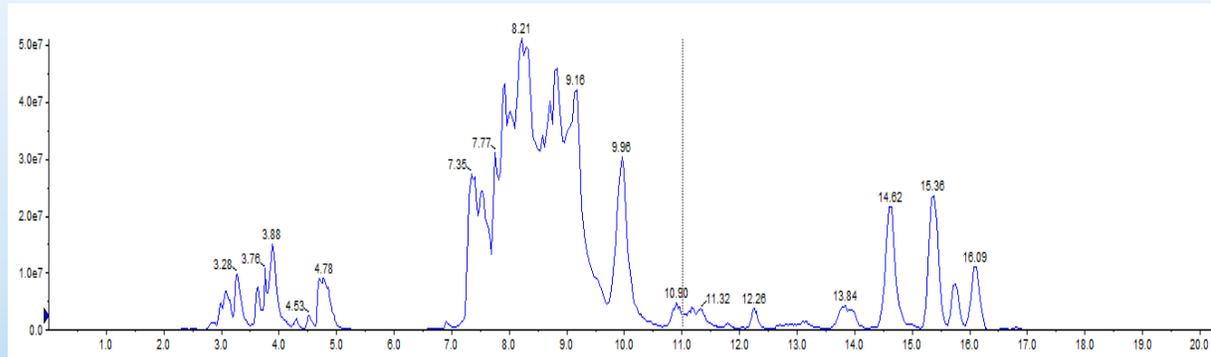

脂质种类	检测数目	脂质种类	检测数目
PC磷脂酰胆碱	95	Cho胆固醇	7
PE磷脂酰乙醇胺	127	PG磷脂酰甘油	28
LysoPC	37	PI磷脂酰肌醇	22
LysoPE	27	PS磷脂酰丝氨酸	12
SM鞘磷脂	55	PA磷脂酸	6
TAG甘油三酯	466	LysoPI	12
ChE胆固醇酯	26	FFA脂肪酸	33
DAG甘油二酯	60	Steroid甾体类	8
CER神经酰胺	28	AcCa	40
DCER二氢神经酰胺	12	Sulfatide硫苷酯	16
LCER乳糖神经酰胺	12	CL心磷脂	84
GluCER己糖神经酰胺	7	Sphingosine base	6
HCER羟基神经酰胺	12	氘代同位素内标	15

AQ1800深度定量代谢组学：整合多种靶向定量方法实现极致的定量可靠性

- 600多种极性代谢物：标准品提取离子色谱图

- 1200多种脂质：Hyperlipidemia血清检测总离子流谱图

AQ1800深度定量代谢组学：稳定地定量出1000个以上的人血代谢物浓度值

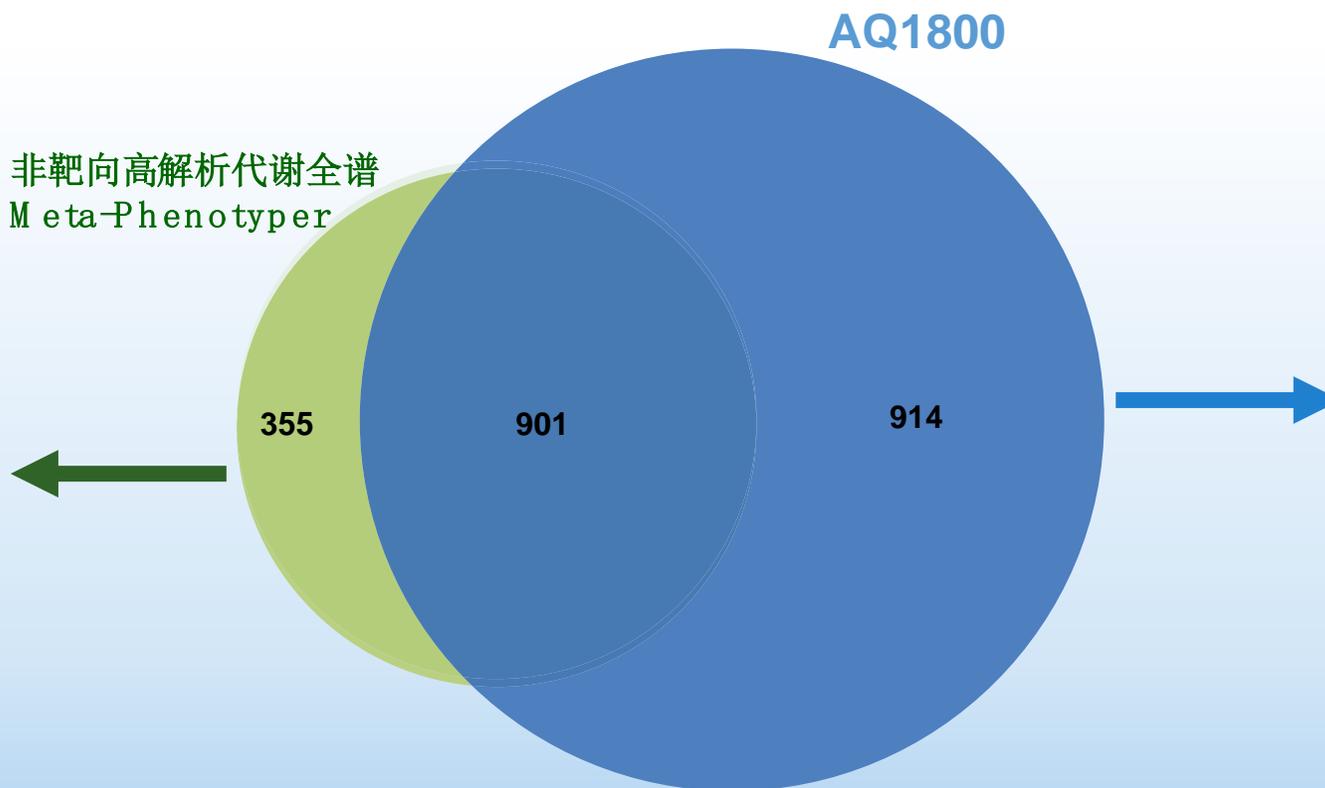

辨析：Intend to detect **VS.** Have been detected successfully

AQ1800：方法**可定量**检测1800种人体内源性代谢物与脂质

AQ1800：人血清中**能够定量到**1100±100种内源性代谢物与脂质

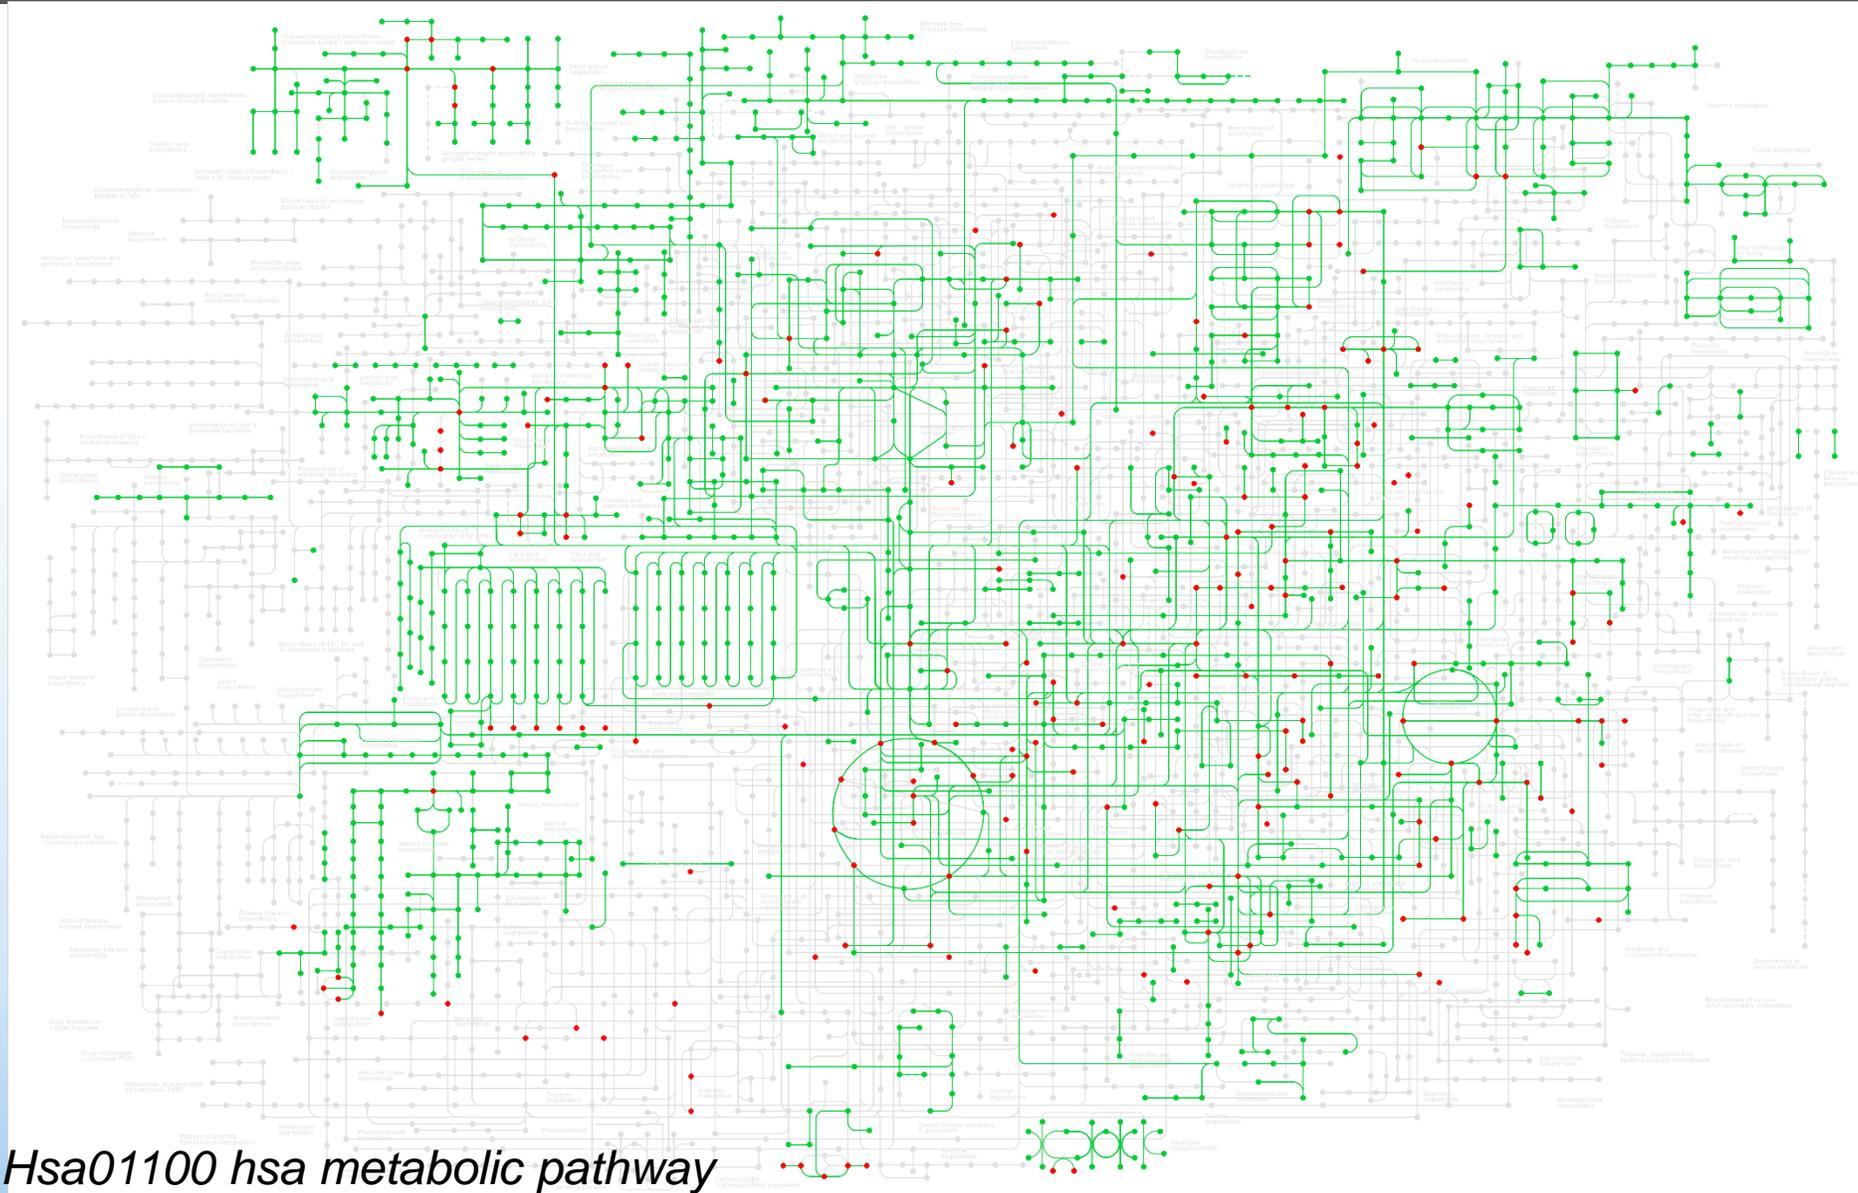

Asn-Val
Asp-Ile
Asp-Leu
Cys-Cys
Glu-Ile
Glu-Leu
Glu-Trp
Perfluorooctanesulfonic acid(PFOS)
Perfluorooctanoic acid(PFOA)

应用场景

Small molecule Biomarkers 生物标志物

provide predictive, prognostic, diagnostic, and surrogate markers of diverse disease states

Deep insight of disease molecular mechanism 疾病机制

inform on underlying molecular mechanisms of diseases

Stratification, sub-classification 亚类分型与病人分类

Allow for sub-classification of diseases, and stratification of patients based on metabolic pathways impacted

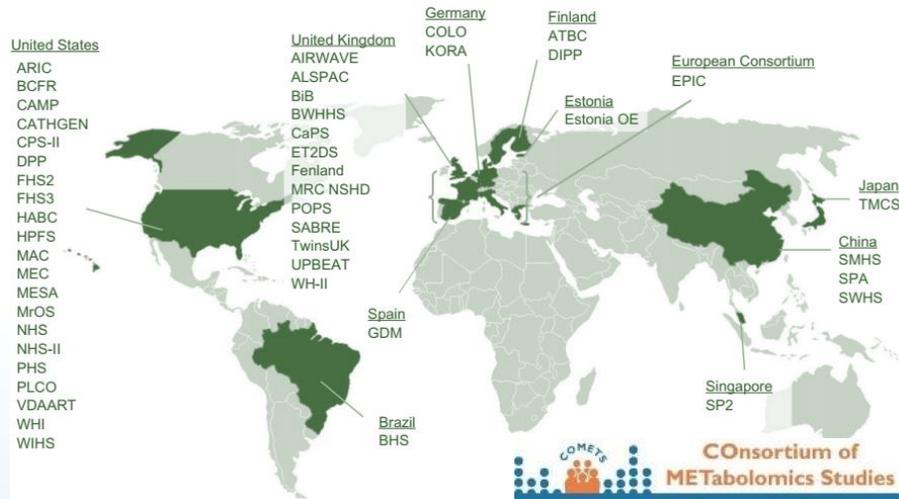

Pharmaco-metabolomics 药物治疗反应预测

Reveal biomarkers for drug response phenotypes, providing an effective means to predict variation

Correlating genotype-phenotype 基因型-表型关联

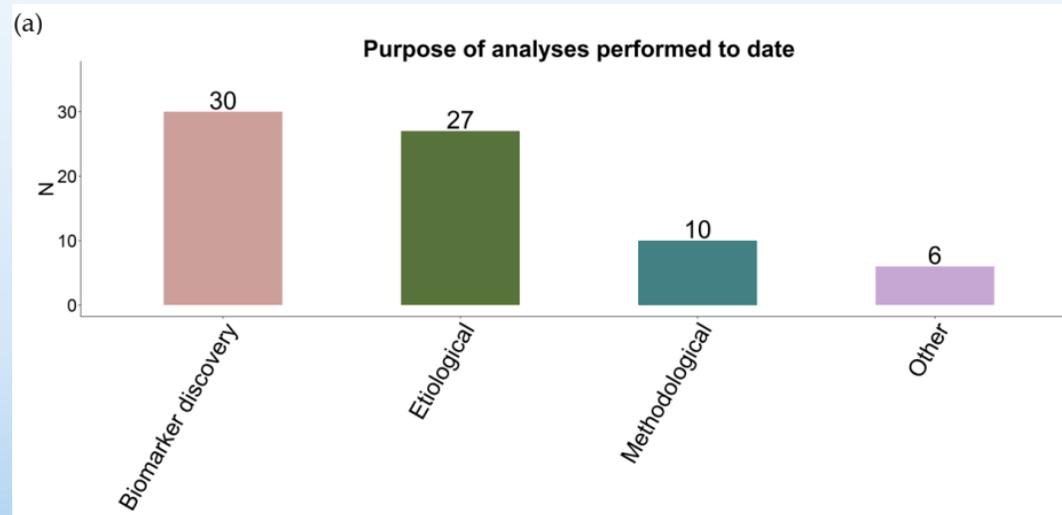

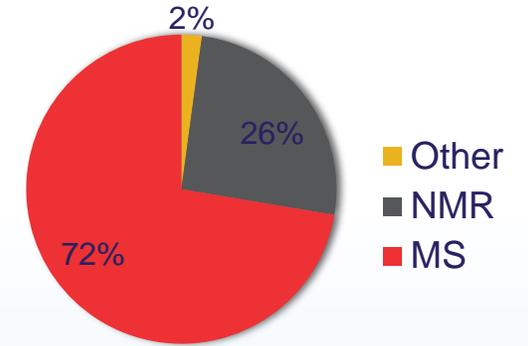

Define a metabotype for each specific genotype, offering a functional read-out for genetic variants

实验设计: Study Design of Human Metabolomics Studies (服务临床科研创新)

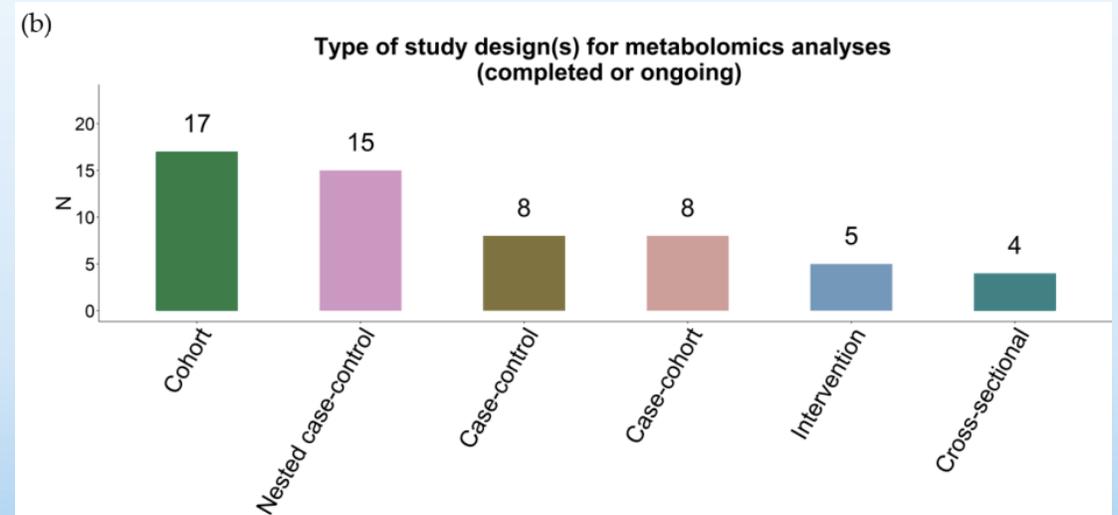

- Consortium of Metabolomics Studies 国际代谢组学研究联盟
- The **Largest consortium** of metabolomics cohort studies
 - 47 prospective cohorts, 13,8670 participants(up to 2018 April)
 - Blood metabolomics (Serum, EDTA-plasma)
 - Follow-up outcomes (Cancer, diabetes, CAD, et al)
 - 多组学68% participants with Genome-wide SNP information
- Convened by USA **National Cancer Institute** from 2014

Technology used in COMETS

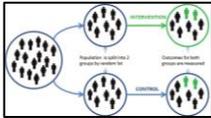

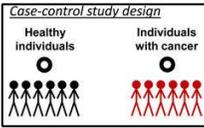

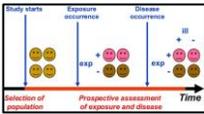

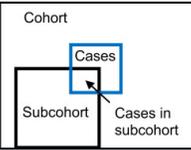

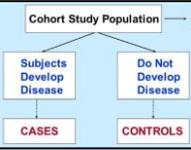

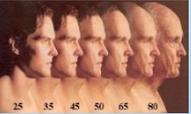

研究目的: Beyond metabolite markers, Towards Mechanism

实验设计: 研究目的, 学科特点, 疾病病种

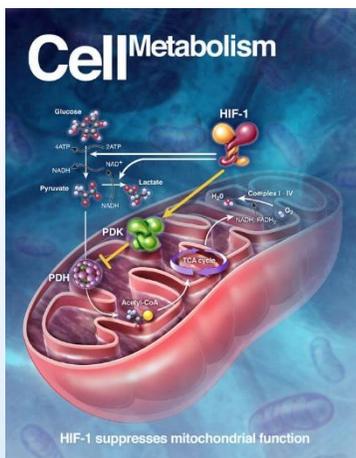

实验设计：不要拘泥于组学的陈规，从临床问题出发，代谢组学就是一种分子表型的观测，技术服务科学
